Additional 60 MW injected into the Southern Interconnected Grid

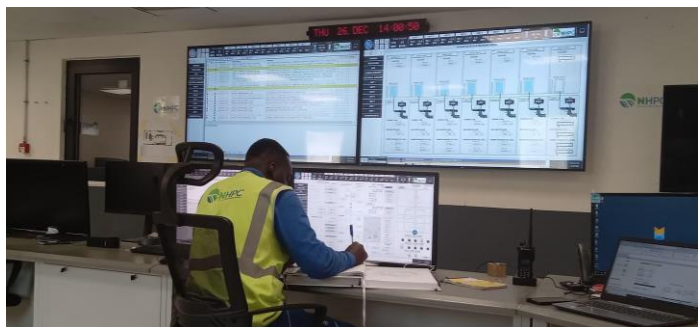

Since the 23rd of December 2024, the fifth unit of the Nachtigal hydroelectric facility has been commissioned, adding an additional 60 MW to the Southern Interconnected Grid and bringing the power currently produced to 300 MW.

The commissioning of unit No. 5 illustrates the concrete progress of the Nachtigal project, which was 98% complete at the end of November. Units N°6 and N°7 are progressing well, with the connection of unit N°6 to the Southern Interconnected Grid on the 26th of December.

NHPC is committed to deliver the entire Nachtigal hydropower facility by early 2025 to ensure Cameroon has an available and competitive supply of green electricity.
