5 FEBRUARY 2025

NHPC carries out its first dental consultation campaign in the project area

More than 1,000 people consulted, cared for and treated

From the 24th of January to the 4th of February 2025, NHPC carried out its first free dental consultation campaign in the Nachtigal project area. More than 1,000 people attended, including about fifty People Affected by the Project (PaPs) from four districts. Besides being sensitized on oral hygiene, they received dental care and treatment in situ, and left with toothbrushes and fluoride toothpaste.

The aim of the campaign was to improve dental health in local communities and strengthen measures to fight oral and dental diseases in the project area. This initiative is part of NHPC's Community Health Plan and responds to the needs expressed by local communities and health districts in the area.

Through this campaign, NHPC reaffirms its commitment to contribute actively to the improvement of people's quality of life in the Nachtigal project area.

The health of Nachtigal project area's people at the heart of NHPC's priorities

Since 2022, NHPC has organized various health campaigns in the Nachtigal project area, as part of its Community Health Plan. More than 5,000 people have already been tested and treated for onchocerciasis and ophthalmological diseases, including surgical care and the supply of medical glasses.

Through its Community Health Plan, NHPC raises awareness, educates and supports communities to prevent the spread of infectious or parasitic diseases in the project area.
