NHPC carries out its fifth campaign to combat onchocerciasis in Nachtigal

1,360 people screened and treated free of charge

From the 15th to the 25th of June 2026, NHPC carried out its fifth campaign to fight onchocerciasis in the Nachtigal project area. Held in Ntui, Mbandjock, Batchenga and Obala districts, this initiative enabled 1,360 people to receive free microfilaria screening and treatment for the disease.

Conducted in integrated health centres and local community spaces (community centres and public schools), this campaign is part of the Community Health Plan implemented by NHPC since its creation. Open to all and based on voluntary participation, it reflects NHPC's ongoing commitment to improve the health of communities living near the Nachtigal project.

More than 6,500 people have received free treatment since 2022

Since the launch of this initiative in 2022 in the Nachtigal project area, more than 6,500 people have benefited from awareness-raising campaigns, microfilaria screening and treatment for onchocerciasis.

As a reminder, the NHPC Community Health Plan, which includes the fight against onchocerciasis, also includes prevention, screening and management measures for other priority conditions such as HIV/AIDS, waterborne diseases and STIs, as well as capacity-building activities for healthcare staff in the Nachtigal project area.
